About Amazon.com Sign In

Amazon Web Services uses information from your Amazon.com account to identify you and allow access to Amazon Web Services. Your use of this site is governed by our Terms of Use and Privacy Policy linked below. Your use of Amazon Web Services products and services is governed by the AWS Customer Agreement linked below unless you purchase these products and services from an AWS Value Added Reseller. The AWS Customer Agreement was updated on March 18, 2016. For more information about these updates, see [Recent Changes](#).

Terms of Use Privacy Policy AWS Customer Agreement © 1996-2016, Amazon.com, Inc. or its affiliates

The screenshot displays the AWS Management Console interface. The top navigation bar includes the AWS logo, a dropdown menu for 'Services', and an 'Edit' button. The right side of the header shows the user 'RaviSK', the region 'Singapore', and a 'Support' link. The main content area is titled 'Amazon Web Services' and lists various services grouped into categories. The 'Compute' category is highlighted with a green box, showing services like EC2, EC2 Container Service, Elastic Beanstalk, and Lambda. Other categories include Storage & Content Delivery, Database, Networking, Developer Tools, Management Tools, Security & Identity, Analytics, Internet of Things, Game Development, Mobile Services, Application Services, Enterprise Applications, and Resource Groups. The 'Resource Groups' section on the right explains that a resource group is a collection of resources that share one or more tags and provides links for 'Getting Started', 'AWS Console Mobile App', 'AWS Marketplace', and 'AWS re:Invent Announcements'. The 'Service Health' section at the bottom right indicates that all services are operating normally, with an update timestamp of Jun 04 2016 11:29:01 GMT+0530.

The screenshot displays the AWS Management Console for the Asia Pacific (Singapore) region. The left-hand navigation pane shows the 'EC2 Dashboard' selected, with sub-links for Events, Tags, Reports, Limits, INSTANCES, IMAGES, ELASTIC BLOCK STORE, NETWORK & SECURITY, and LOAD BALANCING. The main content area is divided into several sections:

- Resources:** A summary of EC2 resources in the Asia Pacific (Singapore) region:
 - 1 Running Instances
 - 0 Elastic IPs
 - 0 Dedicated Hosts
 - 0 Snapshots
 - 1 Volumes
 - 0 Load Balancers
 - 8 Key Pairs
 - 11 Security Groups
 - 0 Placement Groups
- Create Instance:** A section with a blue 'Launch Instance' button highlighted by a green box. Below it, a note states: 'Note: Your instances will launch in the Asia Pacific (Singapore) region'.
- Service Health:** A section showing the status of AWS services in the Asia Pacific (Singapore) region. It indicates that the service is operating normally.
- Scheduled Events:** A section showing no events are scheduled for the Asia Pacific (Singapore) region.
- Account Attributes:** A section on the right showing account details, including supported platforms, default VPC, and resource ID length management.
- Additional Information:** A section on the right providing links to the Getting Started Guide, Documentation, All EC2 Resources, Forums, Pricing, and Contact Us.
- AWS Marketplace:** A section on the right promoting free software trial products and popular AMIs, such as Tableau Server.

The bottom of the console shows a footer with copyright information (© 2008 - 2016, Amazon Web Services, Inc. or its affiliates. All rights reserved.), links to Privacy Policy and Terms of Use, and a system tray with various application icons and the date/time (11:31 AM, 6/4/2016).

Instance: i-168cae98 Public DNS: ec2-54-169-250-84.ap-southeast-1.compute.amazonaws.com

Step 6: Configure Security Group

A security group is a set of firewall rules that control the traffic for your instance. On this page, you can add rules to allow specific traffic to reach your instance. For example, if you want to set up a web server and allow Internet traffic to reach your instance, add rules that allow unrestricted access to the HTTP and HTTPS ports. You can create a new security group or select from an existing one below. [Learn more](#) about Amazon EC2 security groups.

Assign a security group: ☒ Create a **new** security group

☐ Select an **existing** security group

Security group name:

Description:

Type <small>i</small>	Protocol <small>i</small>	Port Range <small>i</small>	Source <small>i</small>	
All traffic	All	0 - 65535	Custom ▾ 0.0.0.0/0	✕

Add Rule

Warning

Rules with source of 0.0.0.0/0 allow all IP addresses to access your instance. We recommend setting security group rules to allow access from known IP addresses only.

Cancel

Previous

Review and Launch

Step 7: Review Instance Launch

Please review your instance launch details. You can go back to edit changes for each section. Click **Launch** to assign a key pair to your instance and complete the launch process.

Improve your instances' security. Your security group, launch-wizard-15, is open to the world.

Your instances may be accessible from any IP address. We recommend that you update your security group rules to allow access from known IP addresses only.

You can also open additional ports in your security group to facilitate access to the application or service you're running, e.g., HTTP (80) for web servers. [Edit security groups](#)

Your instance configuration is not eligible for the free usage tier

To launch an instance that's eligible for the free usage tier, check your AMI selection, instance type, configuration options, or storage devices. Learn more about [free usage tier](#) eligibility and usage restrictions.

[Don't show me this again](#)

Select an existing key pair or create a new key pair

A key pair consists of a **public key** that AWS stores, and a **private key file** that you store. Together, they allow you to connect to your instance securely. For Windows AMIs, the private key file is required to obtain the password used to log into your instance. For Linux AMIs, the private key file allows you to securely SSH into your instance.

Note: The selected key pair will be added to the set of keys authorized for this instance. Learn more about removing existing key pairs from a public AMI.

1 Create a new key pair

2 Key pair name

spark_key

3 4 Download Key Pair

You have to download the **private key file** (*.pem file) before you can continue.

Store it in a secure and accessible location. You will not be able to download the file again after it's created.
